Whole School Change using Technology is Perhaps Scientific

02 March 2014 23:40

My final Link Observation Visit planned at this stage of the project was to Simona Dacho School in Klaipeda. This is a “Basic School” providing education for approx. 1000 students aged 7–15 years from 1st grade to 8th grade. The school has 86 teachers. The school is 155 years old, it has four floors, but the final floor was added on just eight years ago. In the latter part of the school, the classrooms are much smaller; some are used for languages and others for student pastoral support. Throughout the school, there are a range of technologies; there are 21 IWB in various classrooms. There are two computer labs in school and these are used for a range of subjects.

In the hall this morning, there is a full stage with students rehearsing for their pantomime show which will be staged at lunchtime to a real audience! Not far from the main hall is a “little theatre room” that is used for rehearsals. Equipped with full sound and lighting, both rooms are part of the school’s commitment to showcase theatre education.
